MAX MARKS	2 MARKS

CHAPTER – III REQUIREMENT ANALYSIS

3.1 – Customer Journey Map

COSMETIC INSIGHTS: Navigating Cosmetics Trends and Consumer Insights With Tableau

Business Growth & Project Outcome

Data Collection

Collect data from the cosmetics industry by gathering and compiling information from various sources, such as product databases, customer reviews, sales reports, and e-commerce websites, to create a comprehensive dataset that includes product category, brand name, pricing, revenue, skin type, and customer preferences; this dataset will serve as the foundation of your analysis.

Data Cleaning & Processing

Clean up the dataset by removing invalid data entries (e.g., duplicates), addressing missing data (if applicable), filtering irrelevant records, normalizing or standardizing all pricing information, and preparing the dataset for analysis in a structured format.

Data Preparation

Use Python, Pandas, and NumPy tools to convert the collected raw data into a format ready for analysis.

Data Import into Tableau

Port the prepared dataset into Tableau for high-level analysis and advanced visualizations.

Data Analysis

Conduct an analysis of the data to evaluate things like product category performance, revenue trends, pricing trends, and consumer behaviours across the product categories found within your dataset.

Dashboard Creation

Create a variety of interactive dashboards to present the data visually (via charts, graphs, KPIs, revenue dashboards, and brand rankings).

COSMETIC INSIGHTS: Navigating Cosmetics Trends and Consumer Insights With Tableau

Trend Analysis

Conduct trend analysis to identify major changes in seasonality, shifts in consumer preferences, and product popularity over time.

Insight Generation

Develop actionable insights based on an analysis of customer behaviour, product performance, market demand, and price effectiveness.

Strategic Decision Making

Utilize the insights produced from your analysis to improve existing product strategies, make adjustments to your pricing strategy, identify target customers, and enhance future business growth initiatives.

Project Outcome

Create Business Intelligence from raw cosmetic data to enhance decision-making capabilities by providing a clear understanding of the market, improving customer satisfaction levels, and supporting data-based decision-making.
