PROJECT TITLE	COSMETIC INSIGHTS: Navigating Cosmetics Trends and Consumer Insights With Tableau
MAX MARKS	2 MARKS

3.2 – Solution Requirement

The cosmetics industry is continually changing as the way people view beauty changes - often due to social media, shifts in consumer preferences, and innovations in new products being brought to market. In order to be successful, companies need the ability to leverage data for creating insights regarding both the way consumers act and the overall demand for products.

Tableau transforms this data into interactive dashboards, from customer reviews, sales reports, product ratings, surveys, and social media, so that organizations can effectively analyze these insights to help them identify emerging market trends as well as better understand the preferences of their customers.

As a result, key trends that have emerged within the cosmetics sector are: increased awareness surrounding skincare products, utilizing influencer marketing for product promotion, creating customized beauty solutions and products for consumers, offering more sustainable cosmetics, and growing dependence on online shopping behavior. ✨

When consumers purchase cosmetic products, their decision-making process is influenced primarily by brand trust, product quality, price point, discounts offered, and overall customer satisfaction.

COSMETIC INSIGHTS: Navigating Cosmetics Trends and Consumer Insights With Tableau

Through the use of Tableau, companies can analyze the customer journey from Awareness, Consideration, Purchase, Usage, and Loyalty stages by reviewing customer engagement information, purchase history, product sales performance, and repeat purchase behavior.

This insight can help companies make improvements to their product development, marketing strategies, and increase overall customer satisfaction and build brand loyalty. In summary, Tableau gives cosmetic companies the tool for predicting trends, making better business decisions, and ultimately gaining sustainable growth in a competitive market.
