

COSMETIC INSIGHTS: Navigating Cosmetics Trends and Consumer Insights With Tableau

TEAM ID	SWTID-2026-8806
PROJECT TITLE	COSMETIC INSIGHTS: Navigating Cosmetics Trends and Consumer Insights With Tableau
MAX MARKS	3 MARKS

3.3 – Data Flow Diagram

1. Data Collection-The first step is to acquire all cosmetic-related data from multiple sources such as product categories, brand information, prices, revenue generation, skin type, and customer preferences. All these attributes will create the basis for the data analysing, Data Processing-The next phase consists of cleaning and organizing the actual data by removing duplicates, organizing by category, filtering for skin type, standardizing pricing data, and structuring all data as a single data set. It is critical that this processed data is accurate and can be used as reliable data sources in subsequent phases of the analysis.

data Visualization -Once the data has been analyzed, it will be presented in the form of dashboards that will contain charts, graphs, KPIs, rankings of brands by performance, tracked revenue on a monthly basis, and tracked performance against trends. This will allow users to visualize the information contained within the data.
