

CHAPTER-VI

PROJECT DEVELOPMENT

6.1-Pre -Requisites

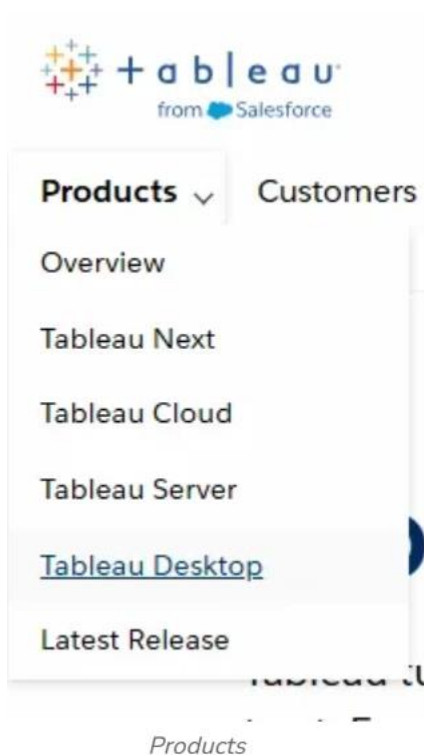

Tableau is a tool for turning data into easy-to-understand charts and reports. It helps businesses analysts and researchers make sense of information.

Installation

Lets install Tableau on our computers.

Step 1: Visit the Tableau Website

Go to the Tableau website and find the "Products" menu.

Step 2: Explore Tableau Products

Tableau offers products:

Tableau Cloud: A cloud-based platform for data analysis and sharing without server management.

Tableau Server: A self-hosted platform for on-premises or cloud deployment with control over data and analytics.

Tableau Desktop: A tool for creating visualizations and dashboards with offline and deep data exploration.

Tableau Next: A focused platform with AI and modular analytics integrating smart workflows and quicker insights.

COSMETIC INSIGHTS: Navigating Cosmetics Trends and Consumer Insights With Tableau

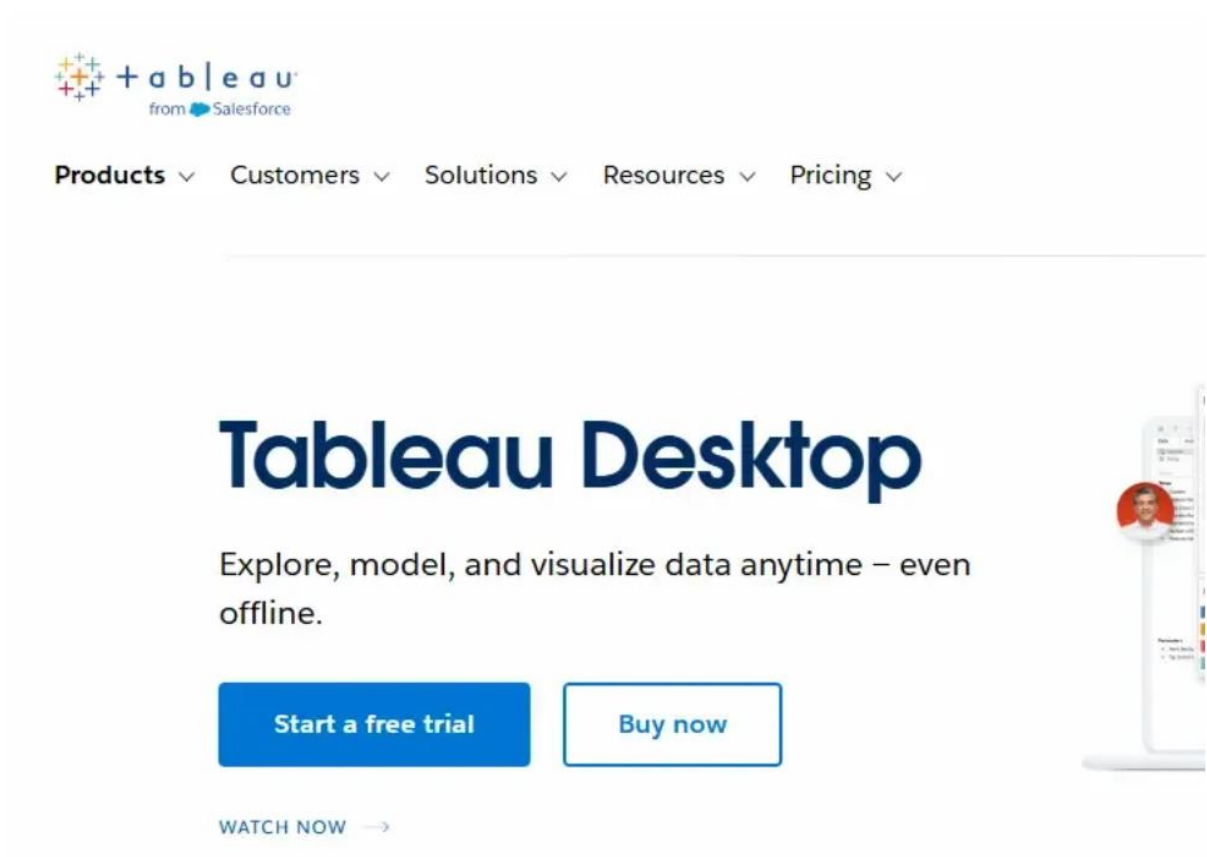

Other Products:

- + Tableau Prep for data cleaning
- + Tableau Public for public visualizations
- + Tableau Mobile, for mobile access

We will download the Tableau Desktop.

Step 3: Select the Tableau Desktop

Choose the Tableau Desktop option. You have two choices:

Start Free Trial

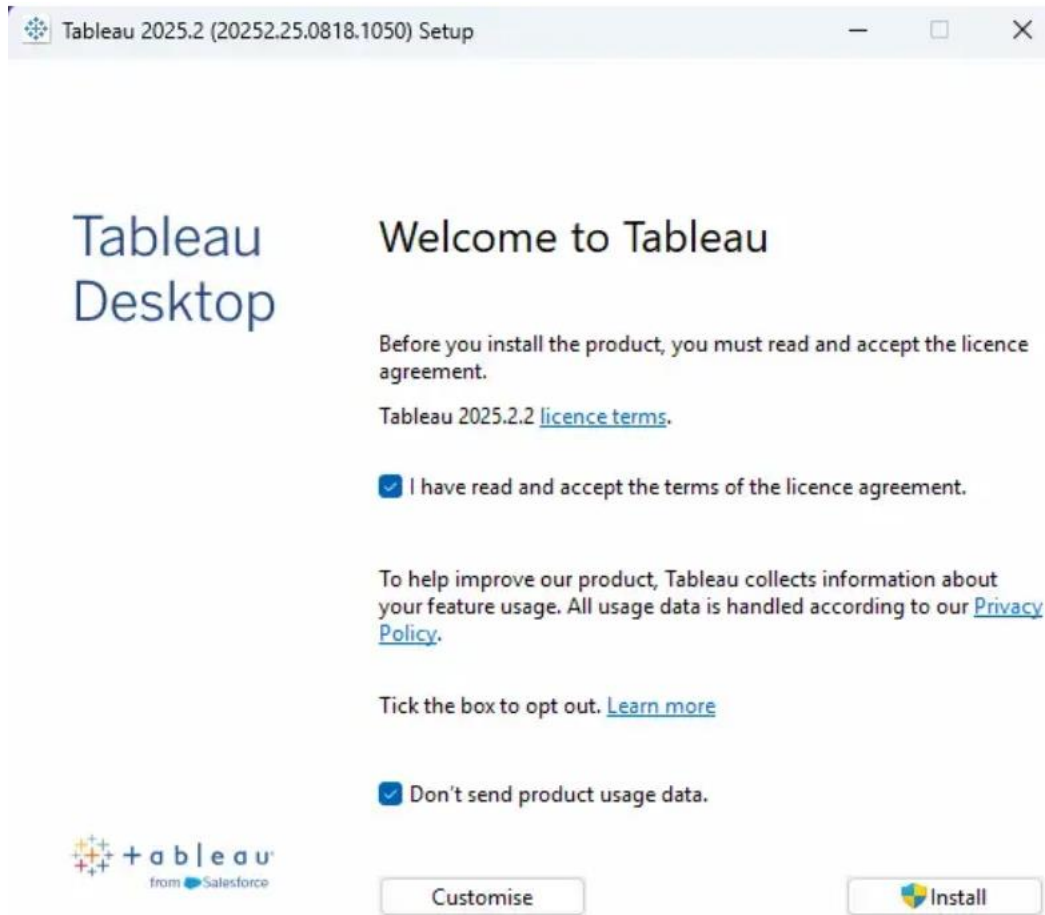

Buy Now

Select the one that suits you.

Step 4: Installation

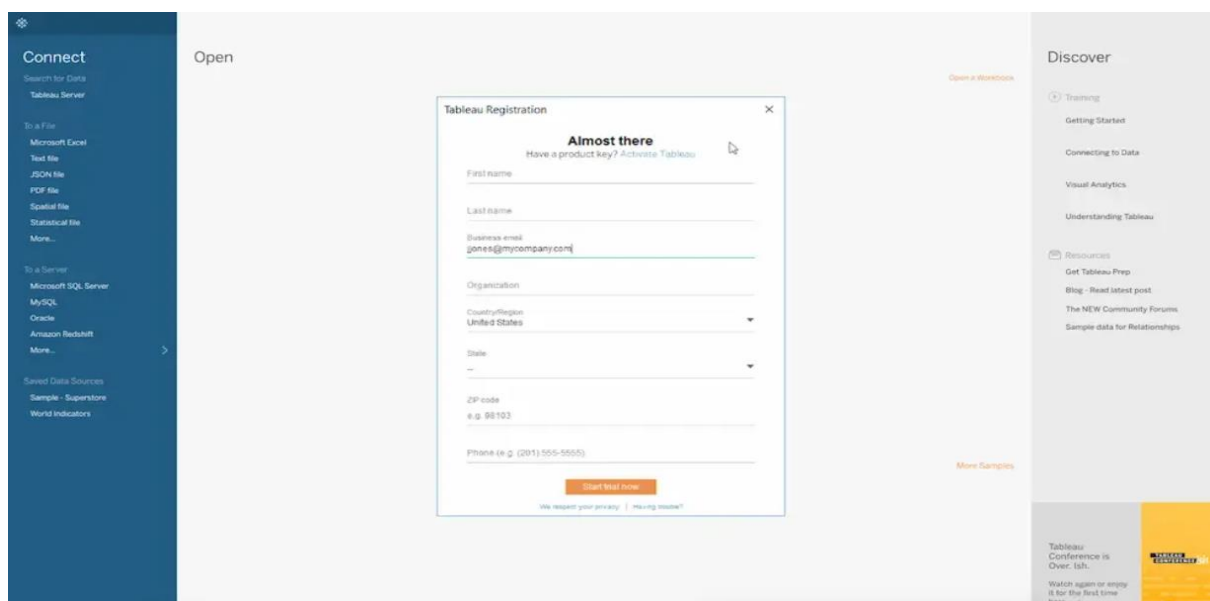

The setup will download. After downloading install it. Open the setup file. Follow the steps.

COSMETIC INSIGHTS: Navigating Cosmetics Trends and Consumer Insights With Tableau

Step 5: Setup

After installation open Tableau Desktop and complete the registration.

Step 6: Use Tableau Desktop

After registration Tableau Desktop **is ready to use**.
