

CHAPTER – IX

ADVANTAGES & DISADVANTAGES

9.1 – Advantages

1. Data-Driven Decision Making

This project allows cosmetic companies to make decisions based on actual data rather than assumptions. Such analysis of product performance, pricing, and customer preferences enables businesses to choose strategies that are more accurate and effective.

2. Better Understanding of Consumer Behavior

It helps identify how different customer groups behave based on their skin types, brand preferences, and product categories. This, in turn, enables better personalization and customer satisfaction.

3. Real-Time Trend Monitoring

The system supports a rapid detection of changes in consumer preferences, thus enabling a response to immediately declining or rising product demand.

4. Improved Product Strategy

By analyzing rankings, reviews, and prices, they can identify some of the high-performing products and make improvements to, or drop, those that are performing poorly.

5. Enhanced Marketing Efficiency

Marketing teams can target the right audience through insights such as skin type suitability and product popularity thereby reducing unnecessary cost of advertising.

6. Quicker Response Coordination for Product Issues

In case those negative feedbacks that carry product concern, companies can instantaneously identify the problematic products and respond with actions like recall or review, thus protecting their brand reputation.

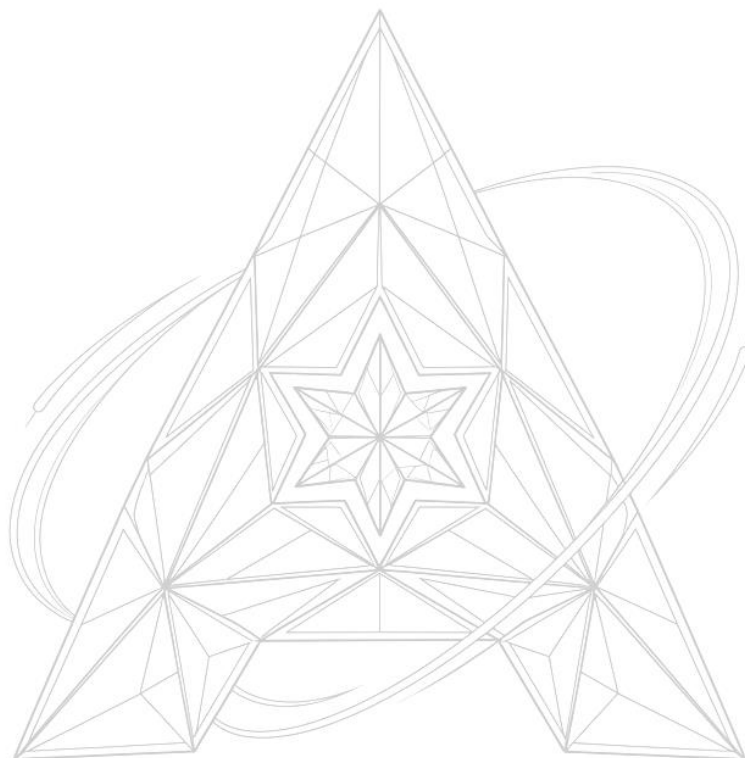

7. Predictive Insights for Innovation

Utilizing past trend analysis will allow companies to predict the future demand on the part of customers and develop new cosmetic products pre-emptive of the Customer needs.
